T-475	Tier 4	684MB/s	948MB/s	24741 IOPS
T-476	Tier 1	1910MB/s	1371MB/s	14689 IOPS
T-477	Tier 2	637MB/s	1477MB/s	42339 IOPS
T-478	Tier 3	1312MB/s	425MB/s	34500 IOPS
T-479	Tier 4	850MB/s	948MB/s	46351 IOPS

Exhibit 1: Storage I/O Benchmark (fio)

Comparative storage performance across both facilities and vendor target specifications. Random I/O measured in IOPS, sequential in MB/s. Test parameters: libaio engine, queue depth 32, 300-second runtime.

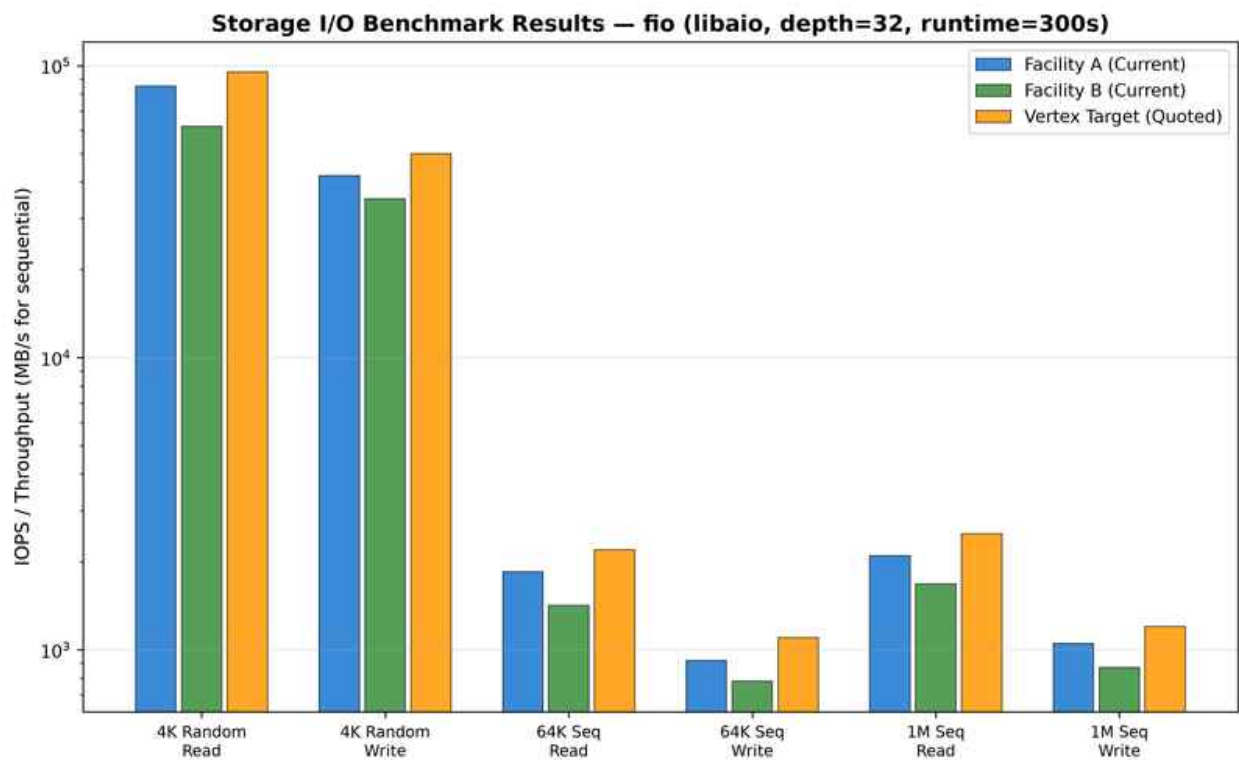

Exhibit 2: Network Throughput Distribution (iperf3)

TCP throughput distribution across 1,000 test iterations per facility, with median and 99th-percentile annotations. Test parameters: 30-second duration, 4 parallel streams.

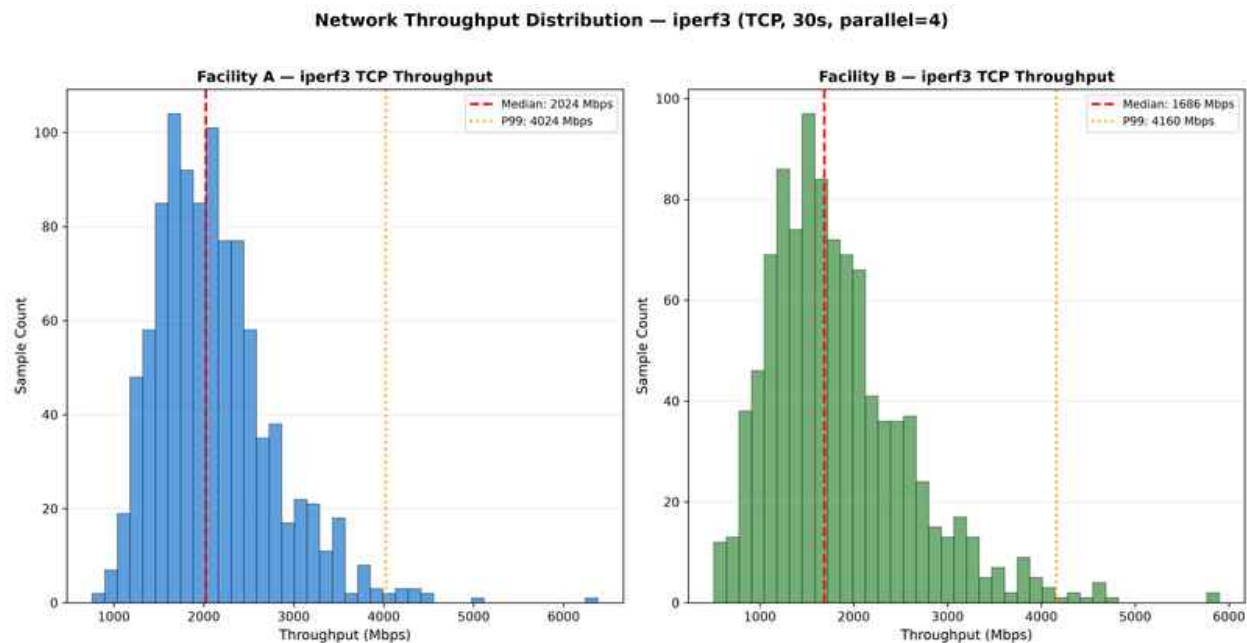

Exhibit 3: Database Scalability Profile (sysbench)

OLTP read/write transaction throughput scaling with thread count, overlaid with average latency curve showing the inflection point where contention begins to dominate.

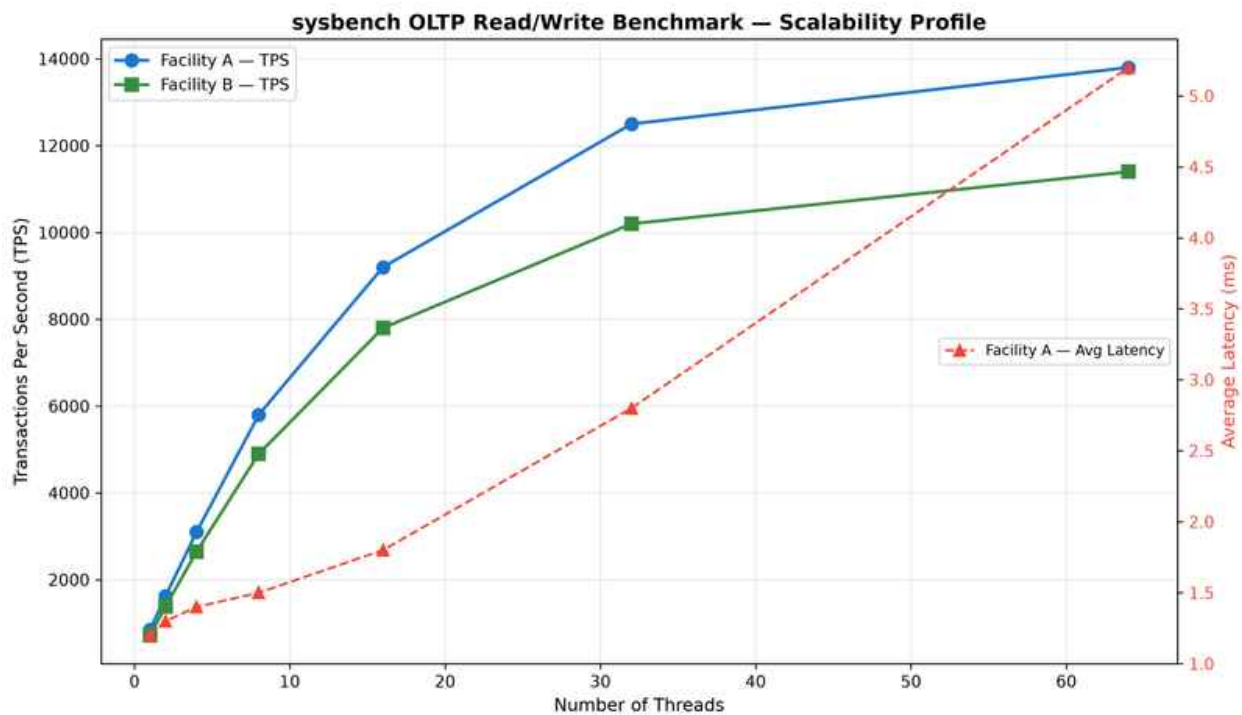

Exhibit 4: Storage Latency Percentile Distribution

Read latency breakdown at key percentiles for 4K random read operations across both current facilities and estimated Vertex performance based on quoted NVMe specifications.

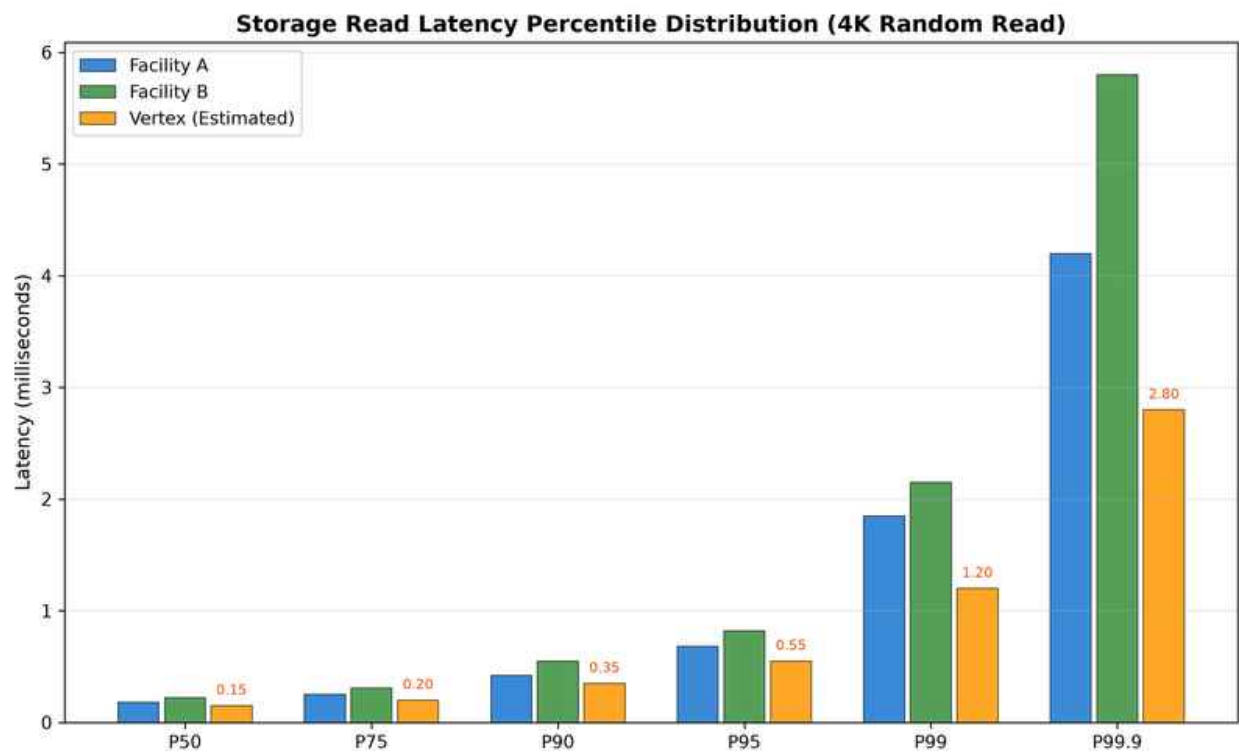

Exhibit 5: 72-Hour Sustained Load Test

Resource utilization profile during a continuous 72-hour stress test showing diurnal patterns in CPU, memory, and I/O wait, validating system stability under sustained production-like workloads.
