

Vendor Evaluation Summary Report

Meridian Financial Services — Data Center Migration Project

Prepared by: Vendor Selection Committee | Date: November 2024 | Version 2.3

1. Evaluation Methodology

The Vendor Selection Committee employed a weighted multi-criteria decision analysis (MCDA) framework to evaluate the three shortlisted vendors. The evaluation framework consists of eight primary dimensions, each carrying a designated weight reflecting its importance to Meridian's migration objectives.

Each dimension was scored on a 0-100 scale based on documented evidence from vendor proposals, reference checks, site visits, and independent verification. The composite score is calculated as the weighted sum of individual dimension scores.

Evaluation Dimensions and Weights:

Dimension	Weight	Vendor A	Vendor B	Vendor C
1. Power Infrastructure	15%	88	72	65
2. Network Connectivity	15%	82	78	91
3. Physical Security	10%	90	85	70
4. Compliance & Certifications	15%	78	92	88
5. SLA & Uptime Guarantees	15%	85	68	82
6. Migration Support	10%	76	88	60
7. Financial Stability	10%	80	74	85
8. Scalability & Growth Capacity	15%	72	82	78
TOTAL WEIGHT	105%			
Weighted Composite Score:	N/A	81.3	79.1	77.8

The scoring model has not yet been renormalized to 100%.

2. Vendor A – Vertex Colocation Partners (Secaucus, NJ)

2.1 Power Infrastructure (Score: 88/100, Weight: 15%)

Vertex operates a Tier III (Concurrently Maintainable) facility with 2N power redundancy through the UPS and generator tiers. The facility has 6.5 MW of total utility capacity with current IT load of approximately 3.2 MW, leaving 3.3 MW of available capacity. Generator fuel storage supports 48 hours of runtime at full load. PUE is reported at 1.45 (trailing 12-month average).

Strengths: High available power headroom; 2N redundancy throughout; proximity to Meridian's existing Newark facility (14 miles).

Weaknesses: Single utility provider (PSE&G); no on-site substation ownership.

2.2 Network Connectivity (Score: 82/100, Weight: 15%)

Vertex is carrier-neutral with 14 on-net carriers. The facility offers direct connect options to major cloud providers. Latency to Meridian's current Newark facility measured at 1.8ms RTT.

Strengths: Low latency to current infrastructure; carrier diversity.

Weaknesses: No direct peering exchange; limited international transit options.

2.3 Physical Security (Score: 90/100, Weight: 10%)

Multi-layered physical security with mantrap entry, biometric + proximity card authentication, 24/7 on-site security personnel, and 90-day CCTV retention.

2.4 Compliance & Certifications (Score: 78/100, Weight: 15%)

Current certifications: SOC 2 Type II, ISO 27001, PCI-DSS Level 1.

HIPAA BAA: Available but requires separate negotiation and additional fee.

Notable gap: HITRUST CSF certification is in progress but not yet achieved.

The facility compliance report indicates Meridian requires HITRUST for regulated workloads.

2.5 SLA & Uptime Guarantees (Score: 85/100, Weight: 15%)

Vertex guarantees 99.995% monthly power and cooling availability. Service credits are tiered:

- 99.995% to 99.99%: 5% monthly credit
- 99.99% to 99.9%: 15% monthly credit
- Below 99.9%: 30% monthly credit

Maximum annual credit cap: 100% of one month's recurring charges.

2.6 Migration Support (Score: 76/100, Weight: 10%)

Vendor provides dedicated migration project manager and 40 hours of remote hands during migration. Physical relocation services available through third-party partner.

No guaranteed migration SLA or downtime commitment.

2.7 Financial Stability (Score: 80/100, Weight: 10%)

Privately held; annual revenue estimated at \$85M. Dun & Bradstreet rating: 3A2.

Has operated current facility since 2015 without ownership changes.

2.8 Scalability (Score: 72/100, Weight: 15%)

Current allocation: 85 cabinets expandable to 150 without contract renegotiation.

Power density: Up to 25 kW per cabinet standard, 40 kW available with liquid cooling.

Campus expansion planned for Q2 2026 (additional 2 MW).

3. Vendor B – NovaBridge Solutions LLC (Edison, NJ)

3.1 Power Infrastructure (Score: 72/100, Weight: 15%)

NovaBridge operates what they describe as a "Tier II+" facility, which is not an official Uptime Institute classification. Power is N+1 redundant at the UPS level but lacks 2N redundancy at the utility feed. Total utility capacity is 4.2 MW with 2.8 MW currently loaded. Generator fuel provides 24 hours of runtime. PUE reported at 1.55.

Strengths: Competitive power pricing (\$0.088/kWh effective).

Weaknesses: N+1 only (not 2N); unofficial tier classification; higher PUE than Vendor A.

3.2 Network Connectivity (Score: 78/100, Weight: 15%)

10 on-net carriers with direct cloud connects. Latency to Newark measured at 8.2ms RTT. Latency to Stamford measured at 12.4ms RTT.

3.3 Physical Security (Score: 85/100, Weight: 10%)

Similar multi-layered security to Vendor A. 60-day CCTV retention (shorter than Vendor A).

3.4 Compliance & Certifications (Score: 92/100, Weight: 15%)

Current certifications: SOC 2 Type II, ISO 27001, PCI-DSS Level 1, HITRUST CSF, HIPAA.

This is the only vendor with current HITRUST certification.

Note: SOC 2 Type II report validity period expires January 2025; renewal audit scheduled but not yet completed.

3.5 SLA & Uptime Guarantees (Score: 68/100, Weight: 15%)

NovaBridge SLA document specifies availability tiers by service level:

- Premium Tier: 99.99% monthly availability
- Standard Tier: 99.95% monthly availability
- Basic Tier: 99.9% monthly availability

Service credit structure is percentage-based but caps at 50% of one month's charges.

The SLA document does not specify which tier applies to Meridian's proposed contract.

Migration assessment places most Meridian workloads at the Premium tier based on criticality, but the commercial proposal references Standard tier pricing.

3.6 Migration Support (Score: 88/100, Weight: 10%)

Comprehensive migration program including dedicated team, migration factory approach, automated tooling, and a migration SLA guaranteeing less than 15 minutes of downtime per workload for live-migratable VMs.

3.7 Financial Stability (Score: 74/100, Weight: 10%)

PE-backed (acquired by Meridian Capital Partners in 2022). Revenue growth 22% YoY.

Concern: PE ownership typically leads to exit event within 3-5 years, which could result in ownership change during Meridian's contract term.

3.8 Scalability (Score: 82/100, Weight: 15%)

Current allocation: 65 cabinets expandable to 120. Power density: up to 20 kW standard.

Adjacent building acquired for Phase 2 expansion (additional 3 MW, available Q4 2026).

4. Vendor C – Cirrus Cloud Infrastructure Services

4.1 Power Infrastructure (Score: 65/100, Weight: 15%)

As a cloud IaaS provider, Cirrus does not provide dedicated power infrastructure. Compute resources are provisioned from multi-region pools. Effective PUE for their primary Ashburn, VA data center is reported at 1.20 (industry-leading). However, Cirrus uses a secondary facility in Columbus, OH with PUE 1.65 for burst capacity and disaster recovery. Workload placement is determined by Cirrus's resource scheduler and is not customer-selectable.

Strengths: Industry-leading PUE in primary facility; no capital outlay for power infrastructure.
Weaknesses: No guaranteed facility placement; customer has no visibility into power redundancy.

4.2 Network Connectivity (Score: 91/100, Weight: 15%)

Global backbone with 25+ points of presence. Direct connect available at 10G.
Latency to Newark: 4.2ms RTT (Ashburn); 18.5ms RTT (Columbus).
Latency to Stamford: 6.8ms RTT (Ashburn); 22.1ms RTT (Columbus).

4.3 Physical Security (Score: 70/100, Weight: 10%)

SOC 2 attested security controls. No customer-accessible facility tours or audits.

4.4 Compliance & Certifications (Score: 88/100, Weight: 15%)

SOC 2 Type II, ISO 27001, PCI-DSS Level 1, FedRAMP Moderate.
HIPAA BAA available as standard contract addendum.
HITRUST: Not certified; shared responsibility model requires customer-side certification.

4.5 SLA & Uptime Guarantees (Score: 82/100, Weight: 15%)

99.99% monthly compute availability SLA with financial credits.
Credit structure: 10% per 0.01% below SLA, capped at 30% of monthly bill.
Note: SLA applies to individual VM availability, not application-level availability.
Multi-VM failure scenarios (e.g., availability zone outage) have a separate SLA track with lower guarantees (99.9%).

4.6 Migration Support (Score: 60/100, Weight: 10%)

Self-service migration tools provided. No dedicated migration team.
Professional services available at \$2,800/day (not included in base pricing).
Estimated 180 hours of professional services for Meridian's scope.

4.7 Financial Stability (Score: 85/100, Weight: 10%)

Publicly traded; market cap 8.2B. Strong balance sheet with 1.4B cash reserves.
Consistent profitability over past 8 quarters.

4.8 Scalability (Score: 78/100, Weight: 15%)

Elastic scaling with no pre-commitment required. Auto-scaling groups available.
Reserved instance pricing requires 1-year or 3-year commitment.
Concern: Vendor pricing model uses EUR for managed services despite US-based operations; currency exposure adds approximately 3-7% cost uncertainty.

5. Comparative Analysis

5.1 Scoring Summary (Raw Scores – Not Renormalized)

Dimension	Wt	Vendor A	Vendor B	Vendor C
Power Infrastructure	15%	88 (13.2)	72 (10.8)	65 (9.75)
Network Connectivity	15%	82 (12.3)	78 (11.7)	91 (13.65)
Physical Security	10%	90 (9.0)	85 (8.5)	70 (7.0)
Compliance & Certs	15%	78 (11.7)	92 (13.8)	88 (13.2)
SLA & Uptime	15%	85 (12.75)	68 (10.2)	82 (12.3)
Migration Support	10%	76 (7.6)	88 (8.8)	60 (6.0)
Financial Stability	10%	80 (8.0)	74 (7.4)	85 (8.5)
Scalability	15%	72 (10.8)	82 (12.3)	78 (11.7)
WEIGHTED TOTAL (of 105%)		85.35	83.50	82.10
NORMALIZED (to 100%)		81.3	79.5	78.2

5.2 Key Differentiators

Category	Best Vendor	Critical Factor
Power Redundancy	Vendor A	Only vendor with 2N throughout
Compliance	Vendor B	Only vendor with HITRUST certification
Network Latency	Vendor C	Lowest latency from Ashburn PoP
Migration Execution	Vendor B	Only vendor with migration SLA
Cost Certainty	Vendor A	All-USD pricing; no currency risk
Long-term Stability	Vendor C	Public company; transparent financials

5.3 Preliminary Committee Recommendation

The committee's preliminary recommendation is Vendor B (NovaBridge Solutions) based on:

1. HITRUST certification eliminates compliance gap for regulated workloads
2. Migration SLA reduces execution risk
3. Competitive pricing on managed services

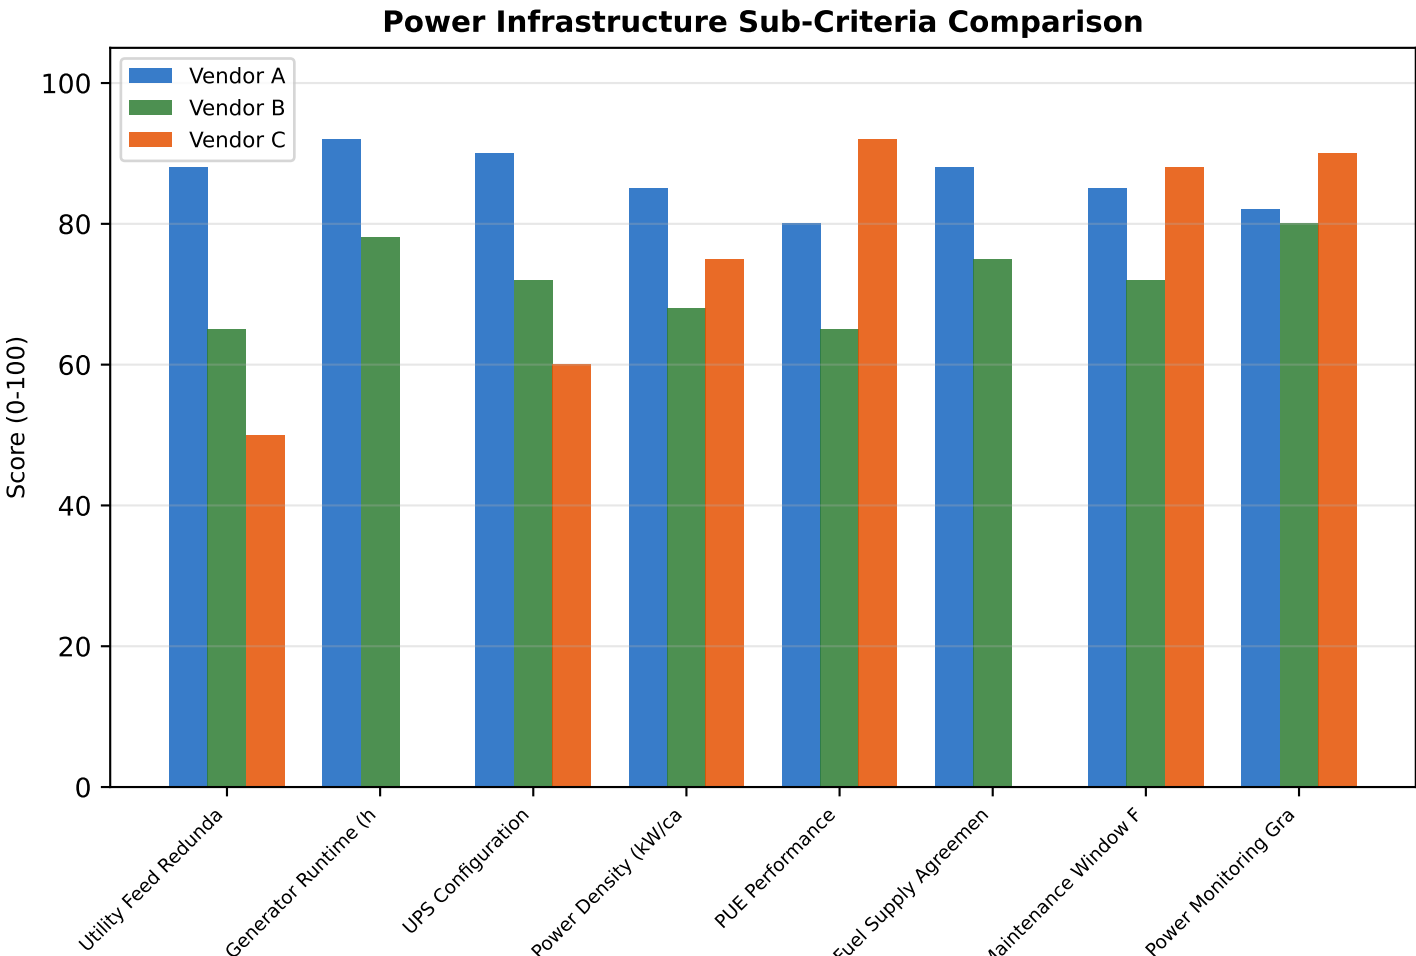

However, this recommendation is PROVISIONAL pending resolution of:

- NovaBridge's SOC 2 audit renewal (expires January 2025)
- Clarification of which SLA tier applies to Meridian's contract
- PE ownership exit timeline assessment
- TCO model completion with stochastic risk factors

The final recommendation will be issued after the TCO analysis is complete.

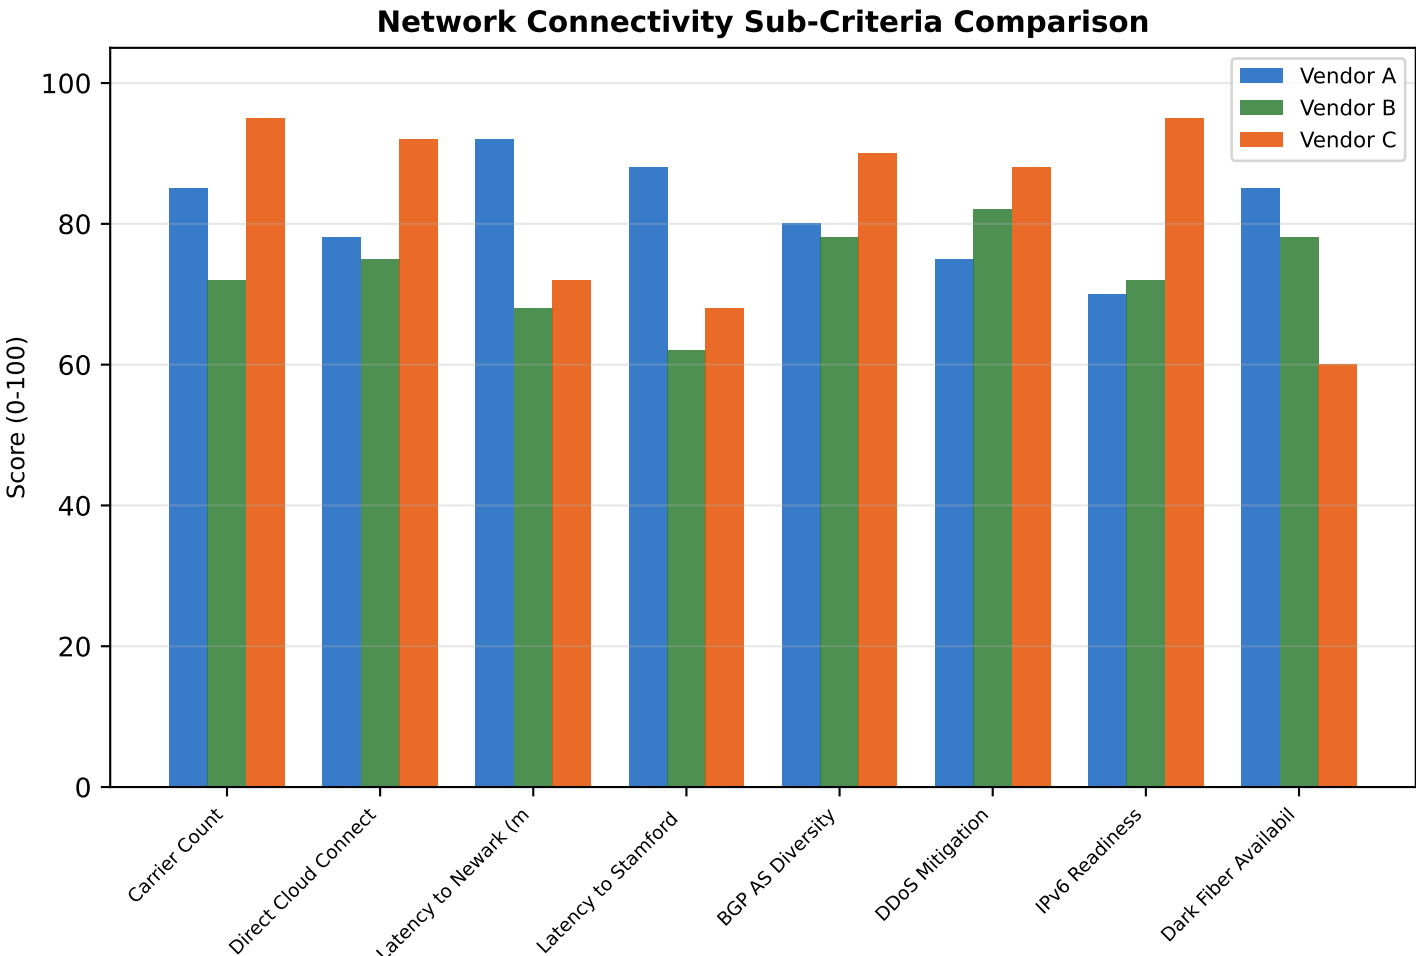

Appendix: Power Infrastructure — Detailed Sub-Criteria Scores

Sub-Criterion	Vendor A	Vendor B	Vendor C	Spread
Utility Feed Redundancy	88	65	50	38
